## In the Claims:

Claims 1-2 (Canceled)

Claim 3. (Currently amended) A method of <u>detecting expression of a human heparanase gene which comprises a polynucleotide as set forth in SEQ ID NO: 1 diagnosing CLL or NHL in a human individual suspected of suffering from a blood cancer, the method comprising monitoring an <u>RNA</u> expression of <u>said human heparanase gene</u> in white blood cells of <u>saidthe</u> individual., wherein absence of said expression of heparanase indicates a positive CLL or NHL diagnosis.</u>

Claims 4-10 (Canceled)
